ACKNOWLEDGEMENT

We would like to express our sincere gratitude to our project guides, **Prof. Rahul Maheshwari** for their invaluable guidance, encouragement, and support throughout the development of our project, **Deep Physio Website**. Their expertise and insightful suggestions helped us refine our ideas and overcome challenges, ensuring the successful completion of this project. We are also deeply thankful to our college, **Sushila Devi Bansal College of Technology**, for providing us with the necessary resources and a conducive environment for our research and development. Lastly, we extend our appreciation to our teammates, **Shubham Singh (0829CS221193)**, **Satyam Goswami (0829CS221182)**, **Vivek kr. Yadav 0829CS221226** and **Virendra Patel (0829CS221222)** for their dedication, teamwork, and unwavering commitment to this project. Together, we have transformed our shared vision into a practical solution that we believe will have a positive impact on the community

ABSTRACT

DeepPhysio is a web-based Hospital and Physiotherapy Management System developed to streamline and automate healthcare operations. The system provides an efficient platform for managing patient records, physiotherapist and doctor information, appointments, treatment plans, billing, and medical reports in a centralized database. Traditional healthcare management methods often involve extensive paperwork, data redundancy, and delays in accessing patient information. DeepPhysio addresses these challenges by digitizing and automating daily administrative and clinical activities.

The application is developed using React.js for the frontend, Node.js and Express.js for backend services, and MySQL as the database management system. The system enables secure user authentication, real-time appointment scheduling, patient progress tracking, and efficient report generation. It helps healthcare professionals monitor treatment history and patient recovery more effectively while reducing manual errors and improving operational efficiency.

DeepPhysio aims to enhance the quality of healthcare services by providing quick access to patient information, improving communication between healthcare providers and patients, and ensuring secure data management. The system is scalable, user-friendly, and suitable for hospitals, physiotherapy clinics, and rehabilitation centers. By integrating modern web technologies, DeepPhysio contributes to better patient care, optimized resource management, and a more efficient healthcare environment.
